

The intelligence runtime for lending.

Validated before it acts.

Smarter after it acts.

KrimOS runs, validates, and learns across the whole credit operation, for institutions that need to move faster and prove it, without rebuilding their stack.

- Full-lifecycle coverage: origination through closure in one system
- Krim-Nyāya validation gate: every agent decision validated before it acts
- Kovida — the world lending model — learns from every transaction it processes
- Deployable on-premise, in a sovereign cloud, or as managed infrastructure

KRIYA

Runs every workflow

KRIM-NYĀYA

Validates every decision

KOVIDA

Learns from every loan

THE GAP IS STRUCTURAL

Why AI stalls in lending.

You are told to adopt AI, and you answer for every outcome it produces. Most tools make that tension worse.

1

Fragmented operations

Credit runs end to end. **AI tools don't.** Each team buys a point solution: a document tool here, a scoring model there. The lifecycle breaks at every handoff, and no one sees the whole picture.

2

AI that acts without accountability

Most AI systems are fast, sometimes confidently wrong, and unable to show their reasoning: generative AI hallucinates, and nothing in its architecture catches it. In a regulated lending environment, that is not acceptable. **"The model said so" won't survive an inspection.**

3

Cloud AI with no sovereignty

Standard cloud AI sends your most sensitive data to external infrastructure: customer profiles, bureau data, transaction history. **For regulated institutions, that data cannot leave your jurisdiction.**

KrimOS was built to solve all three at once.

FROM MODEL FOUNDATION TO CUSTOMER SURFACE

Built to run credit end to end.

Together, five layers form a complete intelligence stack for the whole credit operation.

SURFACES

Krimkar, Kupa & Kula

Customer-facing channels (Krimkar), the command interface (Kupa), and Kula, the copilot your staff query in plain English.

API · web · mobile · voice

AUTONOMOUS CO-WORKERS

Karta

Eight specialist agents across document, risk, decisioning, collections, servicing, audit, and voice.

Document · Risk · Decisioning
Collections · Servicing · Audit · Voice

INTELLIGENCE RUNTIME & VALIDATION

Kendra & Krim-Nyāya

The orchestration engine and validation gate. Every decision passes through Krim-Nyāya, returning a pass, amber or fail verdict and the reason, before execution.

pass · amber · fail
with traceable reason

INTELLIGENCE PRIMITIVES

Kriya

500+ compliance-encoded, credit-native actions: the vocabulary every workflow is composed from.

Docs · Scoring · Workflow
Entities · Compliance

WORLD LENDING MODEL

Kovida

The model foundation. It learns continuously from your lending data, understanding your portfolio more precisely the longer it runs.

learns · adapts · improves

Each layer is independently deployable: institutions can start with a single workflow (collections, underwriting, origination) and expand across the stack as confidence builds.

THE CREDIT LIFECYCLE: HOW KRIMOS RUNS IT

Across every stage. Every role. Every channel.

STAGE	WHAT THE CUSTOMER EXPERIENCES	WHAT OPERATIONS GAINS
Origination	Digital application, document upload, instant acknowledgement	Automated KYC, bureau pull, pre-screen. No manual intake queue
Underwriting	Same-session decision, no back-and-forth	Validated credit decision with full Krim-Nyāya audit trail
Disbursement	Agreement generated, signed, and released in one flow	Sanction automation, compliance checked before release
Servicing	Self-serve EMI queries, statements, hardship requests	Payment reconciliation automated, exceptions surfaced early
Collections	Relevant contact at the right moment, resolution options offered	AI-prioritised outreach, dynamic strategy by risk segment
Closure	NOC issued, account settled, re-engagement surfaced	Automated closure, portfolio analytics updated in real time

WHAT IMPROVES, AND HOW

DECISION SPEED

Decisions in the session

Credit decisions that once waited in analyst queues are validated and returned while the customer is still in the session.

CUSTOMER SELF-SERVE

Branches do less routine work

Servicing queries, hardship applications, and statement requests handled digitally, freeing branch capacity for relationship-driven work.

PORTFOLIO RISK

Earlier signals, fewer surprises

Kovida surfaces behavioural signals across the portfolio before they become arrears, giving collections teams earlier, more targeted intervention points.

OPERATIONAL COST

Volume scales without headcount growth

Repetitive credit operations are automated at scale: document processing, reconciliation, reporting. Teams focus on exceptions and relationships.

HOW WE GET FROM HERE TO LIVE

A path to production. No rip. No replace.

The gap between capability and compliant deployment is the whole game. KrimOS fits alongside your existing core banking and lending infrastructure. Each stage earned before the next. You set the pace.

See.

A working session

Bring one real lending workflow. We walk it through the pre-execution gate live: every verdict, every reason, and the audit trail each decision leaves behind.

Shape.

A proof on your terms

Designed with your risk and compliance teams: which workflow, what data, and what counts as success. It runs in your environment on ring-fenced data, with Krim-Nyāya active at every decision point.

Scale.

Across the lifecycle

One workflow earns its place in production, and the runtime extends as the evidence builds. Kovida learns from your portfolio data: every validated decision sharpens its model for your specific lending context.

How success is judged. Outcomes are measured against your own baseline during the proof of value; that measurement is the exit criterion.

Regulatory posture. KrimOS produces a full, time-stamped audit trail for every decision that runs through it: the kind of documentation the RBI expects under its emerging AI governance framework. Deployment can be fully on-premise or within India's sovereign cloud infrastructure.

Book a working session.

Bring one real lending workflow. We will run it through the validation gate in front of you: every verdict, every reason.
