

KrimOS.

*The intelligence runtime
for lending.*

Validated before it acts.
Smarter after it acts.

- Every decision clears Krim-Nyāya, a pre-execution validation gate, before the system acts on it
- Karta autonomous co-workers handle the full credit lifecycle, from origination through collections to closure
- Kovida — the world lending model — gets sharper with every loan your institution processes

You are told to adopt AI, and you answer for every outcome it produces. KrimOS is how you do both.

KRIYA

Runs every workflow

KRIM-NYĀYA

Validates every decision

KOVIDA

Learns from every loan

IT RUNS. IT VALIDATES. IT LEARNS.

Everything the lending stack needs, in one system.

One system across every credit workflow, from first application to final closure.

Runs

via Kriya

500+ compliance-encoded actions built for credit: place a collections call within permitted hours, pull a bureau report, generate a sanction letter.

Validates

via Krim-Nyāya

A logic gate that checks every agent decision before it acts, returning a pass, amber or fail verdict with a traceable reason.

Learns

via Kovida

The world lending model. It learns your book, and sharpens with every transaction your institution processes.

THE CREDIT LIFECYCLE: KRIMOS RUNS ACROSS ALL OF IT

01	02	03	04	05	06
Origination	Underwriting	Disbursement	Servicing	Collections	Closure

WHAT CHANGES

PROCESS	MANUAL TODAY	WITH KRIMOS
Customer onboarding	Field visit, branch paperwork, 2–3 day turnaround	Digital-first, same-day decisioning
Credit underwriting	Analyst review, bureau pull, manual sign-off	Validated in minutes, with a full decision trace
Collections outreach	Volume dialler, blunt scripts, low contact rates	AI-guided, dynamically prioritised, outcome-tracked
Compliance reporting	Monthly manual pack, prone to delay and error	Auto-generated, regulator-ready, always current

Built for India's regulatory environment. Krim-Nyāya produces a time-stamped, inspection-ready decision trail for every action. Krim's AI co-workers operate within your existing governance framework and connect to core banking systems, bureau APIs, and collection platforms.

The founding team built Saarthi.ai (2017–2025): 250M+ voice-AI calls across 50+ banks and NBFCs, 48M users, 0 compliance violations.

Book a working session. We'll map your stack and pick the first workflow. sales@krim.ai
